

Topics for Consideration by the Executive Committee – June 30, 2015

- 1) Modeling organization – what does this include, different organizations using different model components
- 2) Separating Storm Surge losses from Windstorm losses – how should this be represented in the models
- 3) Data quality issues associated with claims – Professional Team provide feedback to the Commission
- 4) Data quality associated with mitigation factors
- 5) How modelers are working to exceed the standards, to improve the models, tell the Commission what their short term and long term plans are
- 6) Consistency in application of seasonal deductible among models, consider it as a required standard model output
- 7) Trade Secret sessions – develop instructions for the modelers to follow in presenting the trade secret forms, provide modelers with guidance on what the Commission needs to see, difficult for Commission to digest all the information in the limited time they have
