## TOTAL FUND & ASSET CLASS ACTIVE RISK

The SBA monitors aggregate active investment risks with respect to established standards.

Twelve-month rolling risk, reflected on both a predicted and realized basis in the chart below, measures the standard deviation of annualized returns over benchmark returns for the total plan. Similar computations are performed to measure active risk for each asset class.

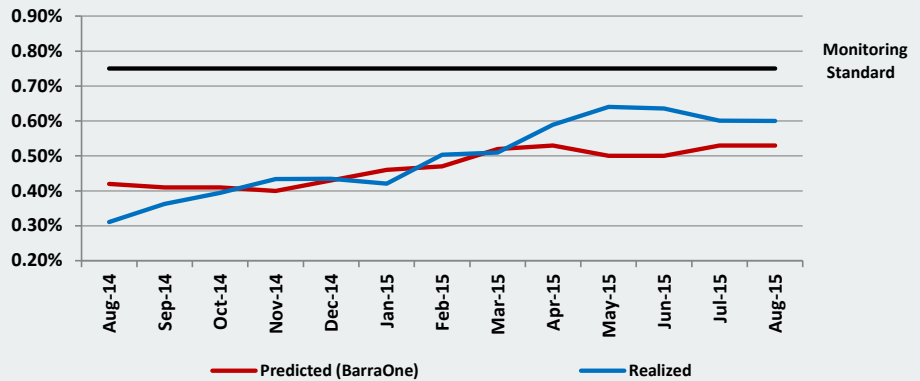

The SBA assigns an acceptable range of risk and measures Realized risk (blue bars in the charts) and Predicted risk (red bars in the charts) against set Risk Budget Monitoring Standards for the total fund and individual asset classes.

For the time periods presented in the charts, no intervention has been necessary.
