

Florida Commission on Hurricane Loss Projection Methodology
Inquiries or Investigations
December 13, 2016

The Commission requests the Modelers discuss the following inquiries with the Professional Team during the 2017 on-site reviews. The Professional Team will report on the inquiries prior to the 2017 standards committee meetings.

1. Investigate the condo-unit floor location impact on loss costs. How is lack of floor location treated?
2. Investigate aspects of the model and inputs that could lead to the greatest reduction in the uncertainty in model outputs (e.g., hurricane frequency, damage functions, incorrect data input, granularity of exposure location (ZIP Code centroid versus street address) data input).
3. Investigate how contamination of claims data (flood loss counted as wind loss) impacts validation and model output.
4. Investigate how the treatment of inland versus coastal exposures has an effect on the spatial evaluation of vulnerability functions.
